

CRScan Solution Overview:

- **Totally wireless** — the ideal solution for access control at construction jobsites and facilities
- **Scanner options are scalable to fit your needs;** for example, a turnstile, lift arm gate, wireless gun or orbit scanner
- **Web-based service,** enabling access to data 24/7/365 via a Web-browser
- **Only requires electrical power;** does not require wired connection to local Intranet
- **Automated time reporting** — keeps track of every minute a worker is on your jobsite
- **Instant notifications via email and text messaging** to handheld devices if a non-compliant worker enters your jobsite
- **No company IT staff required** — not the contractors, not the owners
- Can easily accommodate **multiple entry points**
- **Password protected,** allowing only approved individuals access to confidential data
- **128-bit encryption** to ensure data protection

CRScan has commercial applications in:

- Construction
- Manufacturing and Unions
- Engineering and Design
- Healthcare
- Agriculture
- Homeland Security

CRScan ensures access security and compliance at jobsites and facilities

Construction jobsite access management is a unique challenge. A contractor must meet an owner's requirement for worker safety, site security and insurance compliance from day one when the workplace is literally an empty field with a temporary fence around it. Contractors require workers to have some form of identification, drug test records, training, site orientation and more.

In the past, confirming these credentials on the jobsite every day for hundreds of workers from dozens of companies was a requirement that exceeded available resources — a guard, a gate, a clipboard, a pen.

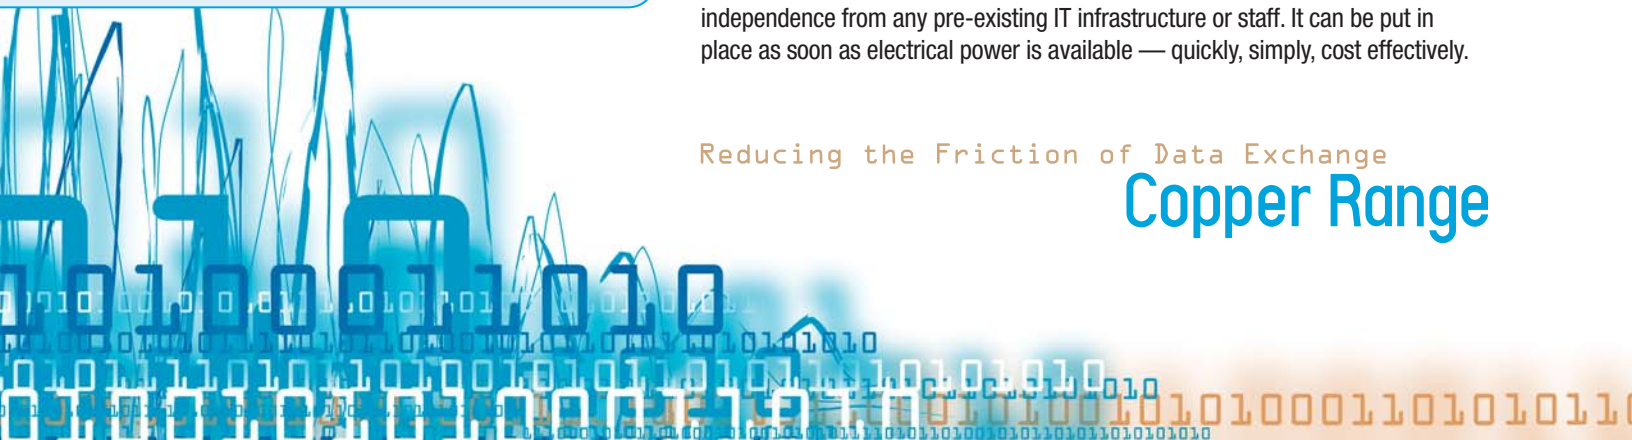

The solution is CRScan from Copper Range.

With options ranging from a simple key card swipe to a roadway lift arm gate to a single-person turnstile, CRScan accurately checks a worker's or rep's credentials against a pre-built, Web-based database of information in a fraction of a second. It then provides up-to-date reporting, attendance and compliance information such as drug test programs, safety training certification, area access approval and any other rules required of workers by employers.

As a patented wireless, cellular system, CRScan operates with complete independence from any pre-existing IT infrastructure or staff. It can be put in place as soon as electrical power is available — quickly, simply, cost effectively.

Reducing the Friction of Data Exchange

Copper Range

Operational Benefits:

- Provides key information where it is needed most: at the jobsite or facility
- Makes it easy to verify workers are compliant with drug testing and safety training BEFORE entering a facility, reducing the risk of on-the-job injury
- Offers unlimited users instant access to current compliance information, including drug test programs, safety training certifications and any other required rules you choose
- Customizable application can be tailored to meet your workflow environment needs
- Offers the ability to turn off/on a worker's access right even after initial authorization
- Avoids placing any burden on your corporate IT or company security system
- Provides an integrated environment for monitoring multiple registered sites and subjects
- Eliminates the need to re-enter data once an individual is in the database
- Flexible report writer lets you generate all necessary management reports including time reports, compliance reports and more
- Automatically updates a worker's location in various union and employer programs, saving contractors time and money, and improving random drug test results
- Customized cards with worker's photo and corporate logo can be printed right at the jobsite

It's easy to get CRScan up and running at your jobsite:

1. Contact Copper Range to register your company and project

2. Access the Copper Range application online and complete your registration

3. Order your CRScan camera, card printer and any readers, gates, etc.

4. Copper Range or one of our affiliates will come to your jobsite and install your equipment if necessary

5. Register new workers or access existing union or contractor databases

6. Issue badges to workers, vendors, subcontractors – anyone to whom you grant access to the site

7. Scan

About Copper Range

Copper Range Inc. specializes in developing data exchange solutions using the latest computer, Internet, cellular and communications technologies. Our middleware solutions operate independently of any one system's specific limitations and reduce the friction often encountered with data exchange. We also develop the appropriate interfaces, reports and views of the data, as well as hosting and managing the solution.

Our innovation, experience and technology allow companies to more efficiently communicate, collaborate and disseminate data across platforms, across industries, across town and around the world. Quickly. Easily. Cost-effectively.
